

GOVERNMENT REBATES AVAILABLE NOW IN NSW!

With sky-rocketing power prices, now is the best time to upgrade to IPART-approved LED lighting.

- ▶ High NSW Energy Saving Certificate (Esky) prices.
- ▶ New Tigerlight highbays produce 150-170lm per watt, for more Eskys.
- ▶ All Primo Highbays are dimmable with 3 stage motion detection dimming & daylight harvesting, delivering even more Eskys.

Tigerlight's new line up of high performance Korean-made LED highbays and LED MegaFloods can attract significant rebates for typical installations, such as office/warehouse/factory installations.

Please ensure you obtain a current estimate as ESC values can change daily and the rebate will depend on other factors including your site's ANZSIC building classification code.

**Primo 12K 17K & 21K LED Highbays
Primo 400W PowerFlood**

**Output up to 170 lm/W
Rebates of 17-35 certificates/fitting**

[Greater VEET rebate with motion sensor or light sensor attached to dimmable highbays - up to 2 more certificates per fitting.]

**Tiger LED MegaFloods
120/180/300W and 450W Floods**

**Output up to 140 lm/W output
Rebates of 18-32 certificates/fitting**

[Number of certificate is an estimate only, based on certain circumstances. Consult an AP for a formal estimate.]

Please contact your Tiger representative for a formal quote on any LED highbay or flood upgrade.

These calculations are based on regulations in June 2017. Estimated rebates are from actual quoted jobs. ACP fees & charges may apply to manage the upgrade. ESCs are a tradable commodity and fluctuations are expected in values. The number of certificates generated per job can vary according to site-specific factors (eg location, aircon, control gear present, etc). Minimums may apply when claiming ESC rebates - contact Tigerlight for more information.
